

## Holding Headaches at Bay

### Bodywork Eases Migraines and Tension Headaches

Cathy Ulrich

"Do you get headaches?" I asked Cindy. She had come to see me for massage to address her neck and shoulder pain but hadn't mentioned headaches.

"Well, yes," she said. "I've always had headaches and, now that you mention it, they seem to be worse when my neck hurts." Cindy went on to say she suffered from them as often as 2-3 times a week and typically treated them with ibuprofen.

Like many Americans, Cindy suffers from chronic, frequent headaches. Her neck pain finally prompted her to seek help, but she was so used to the headaches, she thought they were something she simply had to live with.

#### MIGRAINES.

Migraine headaches occur when the blood vessels in the brain become dilated, usually due to a chemical reaction, such as food allergies or a stress response. They often start with visual disturbances and quickly develop into severe head pain accompanied by nausea, vomiting, dizziness, and sensitivity to light. They're usually felt on one side of the head, but can be on both sides. Migraines are often managed with medications and avoidance of foods known to trigger them, such as red wine, chocolate, aged cheese, and nuts. However, some bodywork techniques can also be effective in easing migraines or decreasing the frequency of these painful headaches.

Freedom from chronic headaches is an option many Americans don't even realize is possible.

What Cindy didn't understand was that frequent headaches are not normal and, with a little proactive planning, there is something that can be done to manage and even prevent them.

### Types of Headaches

Headaches come in many varieties. Following is a short list of the most common types.

#### TENSION HEADACHES.

Exaggerated by stress, tension headaches are related to poor posture, jaw problems (such as temporomandibular joint disorder, or TMJ), and neck pain. Many people describe a headache that starts at the base of the skull and then moves in an arc over the ears and behind

the eyes. Tension headaches are most often caused or exacerbated by poor posture, work station positions, and body mechanics, creating undue stress on the upper neck muscles.

#### MIXED HEADACHES.

The term mixed headache is used to describe a tension headache that leads to a migraine. Typically, the tension headache starts first and the chemicals produced from the pain of it create conditions for a migraine to develop. In people with patterns of mixed headaches, the best way to avoid the onset of a migraine is to treat the tension headache.

## Bodywork Options

A treatment regimen that includes bodywork, attention to body position, and stress management can help prevent or greatly reduce the frequency of headaches, in turn reducing your reliance on medication and the need to avoid food triggers. There are many different bodywork techniques, each with specific approaches for treating headaches. Following is a short list of techniques often effective in treating recurring headaches.

#### SWEDISH MASSAGE.

A tension headache, by its very name, implies the presence of stress and tension. Swedish massage, on the other hand, promotes relaxation and relieves muscle tension. When muscles become tight due to stress or poor posture, they eventually adapt a chronically shortened state. Swedish massage teaches the body how to let go of muscle tension and resets muscle tone.

#### INTEGRATIVE BODYWORK.

Rolfing, Hellerwork, Structural Integration, and CORE are examples of the types of bodywork designed to improve posture and structural alignment. A primary cause of chronic headaches is poor posture, which produces tension in the neck and shoulders because the weight of the head is not properly balanced on top of the spine. Integrative bodywork can produce lasting postural change for greater ease of movement. By selectively freeing the soft tissues, integrative bodywork literally can change postural alignment and remove the stresses and strains on the muscles that cause headaches.

#### DEEP TISSUE THERAPIES.

The integrative therapies mentioned above, as well as neuromuscular therapy and myofascial release, use similar techniques to free connective tissue. A chronically tensed muscle tends to maintain that tension, even after the stressful event has passed. Deep tissue techniques free the connective tissue glue, creating a new way for the muscle to function.

#### REFLEXOLOGY.

Like acupuncture, reflexology works to move energy blockages in the body. By stimulating points on the feet that correspond to organs in the body, reflexologists can promote relaxation, reduce pain, and restore energy flow. Several scientific studies have shown that reflexology is a viable treatment for migraines, in some cases working as well as, or better than, medication--and without the side effects.

#### CRANIOSACRAL THERAPY.

Craniosacral therapy addresses the inherent, gentle, rhythmic movement of the bones in the skull and their effect on the fluid that surrounds, bathes, and cushions the brain and spinal cord and runs throughout the body. Cranial bones move in miniscule amounts as a response to the production and absorption of cranial fluid. With head trauma, whiplash injury, or even severe stress, cranial bone movement can be compromised, resulting in headaches, dizziness, ringing in the ears, or vision disturbances. This therapy restores the normal movement of the cranial bones and fluid.

By addressing the root of the problem, regularly scheduled bodywork sessions can greatly reduce headaches as well as your need for medication. Remember, headaches are not normal, and you don't have to live with them.

Reflexology has proven as, or more, effective than medication--without the many side effects.

# Massage and Cancer

## A Viable Option?

There's no doubt that cancer patients can benefit from massage therapy. In fact, bodywork can serve as a nurturing healthcare option during the stressful, doctor appointment-ridden time of oncology management.

"Cancer treatment places a heavy toxin load on the body, which massage can help eliminate," says Gayle MacDonald, author of *Medicine Hands: Massage Therapy for People with Cancer*. "However, too much too fast may be more than the client's body can comfortably handle. Skilled touch is beneficial at nearly every stage of the cancer experience, during hospitalization, the pre- or post-operative period, in the out-patient clinic, during chemotherapy and radiation, recovery at home, remission or cure, and in the end stage of life."

The benefits of massage for these clients include improved blood circulation, equalized blood pressure, and help with fatigue and nausea. The place to start is by consulting with your physician and

your massage therapist. For those who are two to three months out from treatment, bodywork that can be used includes lymph drainage therapies, trigger point therapy, neuromuscular therapy, myotherapy and myofascial release, among others. It's better to wait before receiving deeper work.

While hospitalized, some appropriate techniques include craniosacral therapy, polarity therapy, reiki and Therapeutic Touch. MacDonald says no matter how severe the treatment's side effects, there's always a way to administer some type of bodywork. According to massage therapist and former oncology nurse Cheryl Chapman, while it's important to receive touch from a qualified practitioner who has worked with cancer patients before, "Touch is always appropriate--there isn't anyone who is untouchable."

If you or someone you love is battling cancer, consider massage as a therapeutic, nurturing choice to help navigate this difficult journey.

**Bodywork offers nurturing relaxation.**

# The Scoop on Sugar

## Not Such a Sweet Story

*Shelley Burns, N.D.*

Most people have no idea just how much sugar is in the foods Americans consume. However, this sweet culprit may be behind many health issues, including skin problems. Here's why.

When refined carbohydrates, otherwise known as simple sugars, are consumed in excess, they cause an increase in blood sugar levels. This excess sugar (glucose) attaches itself to proteins and is referred to as glycosylation. All cells in our bodies have a protein component to them including our hormones, enzymes, cholesterol, and immune cells. As proteins become coated with glucose, they are unable to work effectively.

Collagen, that vital component of a glowing complexion, makes up 40

percent of the proteins in the body. Glycosylation hastens protein cross-linking, which weakens collagen. The result: wrinkles.

But wait, there's more. Sugar also causes an increase in levels of cortisol, the stress hormone, which can interfere with hormonal balance and increase inflammation. Skin inflammation can manifest as acne, puffiness under the eyes, and eczema. Sugar also increases insulin levels and reduces sensitivity of insulin. In fact, research shows people with acne process sugar poorly, which could be a direct result of high cortisol and high insulin levels in the blood.

And finally, sugar depletes the necessary nutrients required to keep the immune

system healthy. For example, sugar interferes with the way the body uses vitamin C, which is needed for the formation of collagen and elastin as well as immunity. It can also lead to sluggish digestion, which also affects the skin.

The best way to steer clear of sugar is to read labels. Avoid products that list sugar in the first three ingredients, and be aware of words ending in "ose" such as sucrose, dextrose, and maltose, all of which are sugar indicators. Also avoid processed foods and refined carbohydrates, such as white flour, white rice, and white potatoes.

Whenever the sweet allure of sugar tempts you, remember, sugar-free is key to beauty.

*Prosperity is not  
without many  
fears and  
distastes, and  
adversity is not  
without comforts  
and hopes.*

-Francis Bacon

Happy Summer!

I hope you enjoy the latest informational newsletter from Sensational Health. If you have received a massage at our office, you know about the fabulous sheets we use on our table. Love the sheets? Now you can have them on your own bed.

This quarter you can bring them home for 20% off- good for all Comphy Co sheet sets and products. All sheet sets include oversized flat, 18" deep fitted, and two pillow cases. Exclusively offered through Sensational Health, place your order at our office or by phone 727-692-1896. To review the sheet colors and other Comphy items, please visit [www.comphy.com](http://www.comphy.com). Color swatches and price list are available at our office.

These sheets make GREAT gifts. Get your holiday shopping done early!

Wishing you health and happiness,  
Christine
